

# Uncover False Information in 5 Minutes

The most affordable web- and mobile-based lie detection technology for quickly and accurately identifying previous ethical and/or criminal activities.

## A New Lie Detector for Protecting Your Organization from Falsehoods

How do you know if someone is who they say they are in an online application? Does your job applicant have a history of stealing from previous employers? What about inappropriate drug use?

Do you have other circumstances where it would be valuable to verify the truth? For example: Is that insurance claim fraudulent? Is that loan application missing pertinent information about the applicant's real financial past or situation? Is that online service provider misrepresenting key information in their profile?

TruthDetect is the world's first nonintrusive, online lie detection

technology that accurately detects deception within 5 minutes by analyzing variations in motor nervous system responses.

TruthDetect can be embedded within your existing verification solution using our Software Development Kit, enabling you to use it as another data point in evaluating the veracity of employees\*, potential customers or immigrants.

Protect your organization with the latest, proven credibility assessment tool for exposing identity and document fraud, as well as other unethical and unlawful activity. No guessing, just reality.

### Highly Accurate

TruthDetect is more than 90% accurate in identify verification (80%+ for other tests).

### Fast

Tests take 5 minutes or less. Results available usually within seconds.

### Affordable

Comparable to the cost of an integrity test, but far more reliable.

## How TruthDetect Works

Deceptive individuals use cognitive resources to inhibit the truth, fabricate the lie, and maintain the lie's consistency, coherence and believability over time. By quickly answering a series of yes/no or form-based questions via a web browser or mobile device, TruthDetect — based on scientifically validated models — measures the validity of responses.

TruthDetect is completely automated, meaning there's no need for a trained examiner. Plus, there are no invasive wires or sensors. Your expenses, staff hours and risk are all substantially reduced. Verifying the information you receive from individuals is now more streamlined than ever.

TruthDetect includes a simple, yet powerful, API that provides flexible integration with existing processes, enabling customers to automate tests.

## Types of TruthDetect Tests

- > Identity verification
- > Insurance claim fraud
- > Unauthorized transactions
- > Previous criminal behavior

\* The Employee Polygraph Protection Act (EPPA) prohibits using lie detectors like TruthDetect for hiring in private companies. However, federal, state and municipal government employees or contractors may be tested. Private companies such as insurance companies could use TruthDetect to test customers, but not their employees.
