

Uncover the Truth

Introducing EyeDetect — A scientifically validated technology for quickly assessing the honesty of offenders *in just 30 minutes.*

Ensure Honesty of Sex Offenders

Sexual assault, sexual abuse, exhibitionism, voyeurism, and viewing child pornography are serious crimes. During periodic screening or in therapy sessions, it's vital that treatment providers have the most advanced tools available to help uncover the truth while treating sex offenders convicted of these serious crimes.

Many treatment providers have concerns using polygraph examinations because they can be expensive and time-intensive. Plus, the intrusive nature of polygraph, along with the presence of an examiner, can harm the rapport you're trying to build with the offender or can be uncomfortable for those with mental disorders such as Post-Traumatic Stress Disorder (PTSD) or Attention Deficit Disorder (ADD) or for others with character disorders such as Autism Spectrum Disorder (ASD) or Asperger Ssyndrome (AS).

With EyeDetect, you can easily conduct a test prior to a therapy session in your own office. Within about 30 minutes, you'll know with a high degree of certainty whether the sex offender has been honest — such as in the case of parole violations or when disclosing information about past victims.

EyeDetect tests are standardized and the testing process is automated and uniform. Best of all, EyeDetect never gets tired or influenced.

Test a Variety of Sex Offenders

EyeDetect tests are designed to uncover offenses ("Did you commit the crime?") or re-offenses ("Did you commit the crime again?"). It's ideal for determining if a sex offender has violated parole or probation ("Have you violated conditions of parole?") and uncovering details during a sex history discussion ("Have you disclosed all victims?").

What is EyeDetect?

Deception causes subtle changes in the behavior of the human eye due to increased cognitive load. EyeDetect uses a high-speed, infrared eye-tracking camera to measure these subtle changes, and then combines the measures in a mathematically optimal manner to detect deception with an 86% accuracy.

How EyeDetect Makes Testing Sex Offenders Easier

-  **Innovative** - First deception detection method that effectively monitors subtle changes in the eyes to "see truth."
-  **Fast Results** - Tests take 30 minutes and results are ready within 5 minutes.
-  **High Accuracy** - Classifies sex offenders as truthful or deceptive with at least 86% accuracy.
-  **Nonintrusive** - No cables, wires or other sensors to attach to the examinees.
-  **Simple to Use** - In less than three hours, you can learn to administer tests and interpret results.
-  **Incorruptible & Unbiased** - The human-based examiner element is eliminated, and the data are encrypted in real time.
-  **Bank-level Secure** - Same encryption and physical security that banks use to protect sensitive information.
-  **Scalable** - With one EyeDetect Station, you can administer up to 36 tests per day.
-  **Flexible & Portable** - Adaptable to your organization's needs. You can use EyeDetect on-site, send examinees to an authorized testing center, or take it to remote offices.
-  **Multilingual** - Tests are available in various languages.

Economical - You save by having one person administer many tests daily. Plus, the short test time minimizes opportunity costs.

Complete Analytics & Reporting - Reports are ready within 5 minutes. Group test results may be filtered by date, department, test type, credibility score and more.

How EyeDetect Works

1. Examinee takes 30-minute true/false test.
2. Data captured, encrypted and uploaded to a secure server in the cloud.
3. Proprietary algorithms interpret the data and provide a report with the Converus Credibility Score within 5 minutes.
