

The KBA Solution Every Identity Verification Process Needs

IdentityDetect reduces fraud. Offers another security level on top of existing processes.

 **IdentityDetect**[®]
Identity verified, almost instantly.

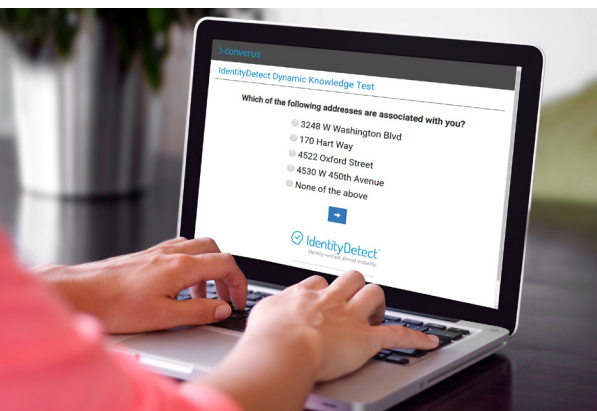

Know Your Customers with FAR Greater Confidence

Reduce fraudulent transactions, enhance knowledge-based authentication (KBA) identity verification capabilities, and increase the efficiency of onboarding processes with web-based IdentityDetect.

Dynamic KBA Alone is Insufficient

Dynamic KBA is widely used, but by itself is not very effective because answers are easy to obtain and there's a high percentage of false positives. IdentityDetect can reduce these unnecessary, additional expenses.

IdentityDetect Strengthens KBA Solutions

IdentityDetect can integrate with an existing KBA implementation to make it more effective. Unlike other solutions, IdentityDetect measures **how** customers behave when answering questions and uses artificial intelligence to determine if an identity is real.

Easily Integrable

IdentityDetect is easily and quickly integrated into existing transaction processes and can be customized to your specific needs.

Why Adopt IdentityDetect?

By integrating IdentityDetect, you can:

- Verify identities by analyzing how people react when answering questions. In other words, this technology has the unique ability to go beyond just determining if questions are answered correctly.
- Reduce the time, cost and resources dedicated to resolve false positive alerts.
- Quickly meet anti-money laundering compliance requirements.
- Prevent false biometrics from being accepted as true.

Integrates Seamlessly

Integrates in mere hours to current processes.

Fast

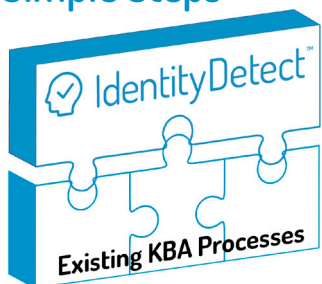

Runs simultaneously with current processes.

Highly Accurate

91% accurate.

3 Simple Steps

1 - Seamlessly integrate IdentityDetect with existing KBA processes.

2 - IdentityDetect's algorithm simultaneously analyzes **how** individuals respond to KBA questions in real-time.

3 - IdentityDetect confirms whether or not the individual is lying about who he/she claims to be.
