EyeDetect DLC Test Proves its Worth – Here Are 3 Examples

Last January we released the new [Directed Lie Comparison \(DLC\) test protocol](#). Credibility assessment experts using the new DLC test are finding great value. Here are three examples:

1) Online Sex Solicitation of a Minor in Utah

A police officer posing online as a 13-year-old girl was propositioned by an adult male. In their online communication, the adult discussed sexual topics, sexual experiences, and asked for nude photographs. The adult male scheduled to meet the 13-year old girl (a.k.a., police officer) to have sexual contact at a train station in a certain city. The adult male was arrested at that train station on the date/time he indicated that he would meet the young girl. When arrested, he claimed that he was at the train station to meet someone else. He failed the EyeDetect test that asked if he was going to meet a 13-year-old girl at the train station.

2) Juvenile Probation Violation in Texas

Juvenile sex offenders in Texas that are on probation are routinely tested for violations of probation. On this particular occasion, one young man was tested for violations, including viewing pornography, sneaking out without permission, using tobacco, and possessing illegal weapons. He failed the EyeDetect test that asked about probation violations. After the test, he confessed to the examiner about violating four specific rules.

3) Doctor Tested for Possible Sex Addiction in Missouri

A doctor accused of inappropriate sexual contact with patients failed a polygraph exam and admitted afterward having sexual contact with a patient. The doctor was re-polygraphed to validate that admission. When he failed that validation test, the doctor indicated it was due to nervousness. Later, he took two more polygraph exams to determine the number of victims. He failed both exams as well. After failing 4 polygraph exams (and blaming nervousness for the test failures), he took an EyeDetect test. During the EyeDetect pre-test discussion, he was told that nervousness and anxiety likely wouldn't have any effect on the test results. The doctor failed the EyeDetect test with a credibility score of "1" (the lowest possible score). Finally, he admitted to having 8 victims during his career.

EyeDetect Training Announced

We're now offering standard and advanced EyeDetect training at our Corporate HQ in June and September this year. (Contact us for information regarding the option to have this training conducted onsite.) The training consists of 3 days focused on standard and advanced topics. Attendees can pick and choose which days to attend. The advanced sessions (days 2 and 3) include training on writing DLC and RCT/4R tests. [Click here to see the training agenda](#). See the press release below for additional information.

To register, call Ashley at +1 801.331.8840.

New EyeDetect Video Released

We've produced a [new promotional EyeDetect video](#). Now that EyeDetect can be used for screening *and* diagnostic tests, it's important to tell the world. This video automatically plays for anyone visiting the Converus YouTube Channel for the first time. (Have you subscribed to our [channel](#)? Be sure you do; that way you'll stay up-to-date on our latest posts.)

Welcome New Service Partners

A warm welcome to our new Converus Service Partners:

- EyeVestigate, Inc. (Canada)
- RISSP (Mexico)

We continue to attract the best of the best in the credibility assessment industry. (Want to become a Converus Service Partner? [Click here](#).)

Click the forward button above to send this newsletter to others interested in our advanced credibility assessment tools. And please share industry news with us! We'd love to hear from you. Email: info@converus.com.

About Converus

Converus provides scientifically validated credibility assessment technologies. EyeDetect® detects deception at 86-90% accuracy in 15-30 minutes by analyzing eye and other behaviors. IdentityDetect™ detects falsified identities at 91% accuracy in about 1-3 minutes by analyzing subtle variations in the motor nervous system responses. IntegrityDetect™ identifies the most trustworthy individuals at 80% accuracy in 6 minutes by analyzing a person's implicit associations. These technologies help protect countries, corporations and communities from corruption, crime and threats. Converus is headquartered in Lehi, Utah, USA.
