# Verify Traveler Identities Instantly

An unbiased, highly accurate web-based and mobile app technology for verifying the identity of immigrants and travelers.

IdentityDetect®
Identity verified, almost instantly.

Countries Can Protect Borders from Visitors with Fake Identities

IdentityDetect is the first browser-based identity verification technology that accurately detects falsified identities in 1-3 minutes by analyzing subtle variations in the motor nervous system responses of travelers.

The estimated number of international travelers surpassed approximately 1.3 billion in 2017 (Statistica). Most of these travelers use legitimate passports and travel documents. Unfortunately, a small percentage have fraudulent identification. These are the individuals that must be effectively identified and stopped.

Interpol reports that over 40 million passports have been reported stolen since 2002. While not all stolen passports are used for illegal travel, some are. In 2012, the United States investigated almost 4,000 cases of passport fraud. The European border agency Frontex says over 100,000 people attempted to cross EU borders with a false passport.

Governmental entities are responsible for ensuring traveler safety and protecting borders. Now, with IdentityDetect, they can quickly verify the identities of immigrants and travelers. These individuals can use a mobile device to take an IdentityDetect evaluation. Those who pass the test can be fast-tracked; those with questionable results can undergo additional screening.

IdentityDetect doesn't validate the authenticity of passports or other travel documents. However, it can confirm that the person holding the passport is the person listed on the passport. IdentityDetect can provide another crucial data point in evaluating the veracity of individuals entering a country.

Why IdentityDetect?

By adopting IdentityDetect, you can:

- Verify identities by analyzing <u>how</u> people react when answering questions. In other words, this technology has the unique ability to go beyond just determining if questions are answered correctly.

- Reduce the time, cost and resources dedicated to resolve false positive alerts.

- Prevent false biometrics from being accepted as true.

**Integrates Seamlessly**
Integrates in mere hours to current processes.

Fast
Runs simultaneously with current processes.

**Highly Accurate**
91% accurate.

---

3 Simple Steps

1 – Seamlessly integrate IdentityDetect with existing KBA processes.

2 – IdentityDetect's algorithm simultaneously analyzes **how** individuals respond to KBA questions in real-time.

3 – IdentityDetect confirms whether or not the individual is lying about who he/she claims to be.
