

Uncover the Truth

Introducing EyeDetect — A scientifically validated technology for quickly assessing honesty *in just 15 minutes.*

Must-Have Technology for Your Practice

Many treatment providers have concerns using polygraph examinations because they can be expensive and time-intensive. Plus, the intrusive nature of polygraph, along with the presence of an examiner, can harm the rapport you're trying to build with the patient.

With EyeDetect, detecting deception in unfaithful spouses or partners is now faster, more accurate, and more cost-effective.

EyeDetect decreases the game-playing by patients determined to keep secrets from loved ones. It breaks through denial and brings patients face-to-face with the reality of their inappropriate behaviors and their consequences.

What is EyeDetect?

Deception causes subtle changes in the behavior of the human eye due to increased cognitive load. EyeDetect uses an infrared eye-tracking camera to measure these subtle changes, and then combines the measures in a mathematically optimal manner to detect deception with a 90% accuracy.

EyeDetect speeds up recovery for the unfaithful and addicted, as well as their traumatized spouses.

EyeDetect Is:

Innovative - First deception detection method that effectively monitors subtle changes in the eyes to "see truth."

Fast Results - Tests take 15 minutes and results are ready in less than 5 minutes.

High Accuracy - Classifies offenders as truthful or deceptive with at least a 90% accuracy.

Nonintrusive - No cables, wires or other sensors to attach to the examinees.

Incorruptible & Unbiased - The human-based examiner element is eliminated, and the data are encrypted in real time.

Bank-level Secure - Same encryption and physical security that banks use to protect sensitive information.

Flexible & Portable - Adaptable to your organization's needs. You can use EyeDetect on-site, send examinees to an authorized testing center, or take it to remote offices.

Multilingual - Tests are available in various languages.

Economical - You save by having one person administer tests. Plus, the short test time minimizes opportunity costs.

Complete Analytics & Reporting - Test results may be filtered by date, department, test type, credibility score, and more.

EyeDetect will revolutionize your counseling with the unfaithful.

How EyeDetect Works

1. Examinee takes a 15-minute true/false test.
2. Data captured, encrypted and uploaded to a secure server in the cloud.
3. Proprietary algorithms interpret the data and determine whether the examinee is credible or deceptive in less than 5 minutes.
