DECEMBER 2021

Message from Converus President and CEO

EyeDetect+ Receives First Peer Review; New Product Update Enhances Technology for Polygraph Examiners

Hi,

We're ending 2021 with a bang! First, EyeDetect+ received its first peer review. Second, new updates make the product easier for polygraph examiners and others to do their job effectively. Converus is poised to start the New Year running.

Peer-Reviewed Book Chapter

The new Hybrid MCT and DLC testing protocol studies performed with EyeDetect+ were recently peer-reviewed and published in the book, "Psychology Applications & Developments VII." This clearly demonstrates the effectiveness and utility of the world's first automated polygraph. Thanks to Mark Handler and others for their work on this project.

The review of EyeDetect+ comprises chapter 8 in this book. You can read that chapter [here](#).

Recent EyeDetect Updates

Polygraph examiners and other credibility assessment experts will be excited about our recent updates to EyeDetect+ Manager software and the Test Report.

[Read product update document](#) | [Watch product update video](#)

Here are a few of the advancements made in the product update on December 1:

EyeDetect+ Manager

- Examiners/proctors of EyeDetect+ tests can now insert annotations and comments into a test in real-time AND manually control and advance to the next question by pressing the spacebar during the test
- Get improved polygraph signals and tracings in both EyeDetect+ Manager and the Test Report Charts

Enhanced Test Reports

- Written and visual clarity on how the examinee answered vs. expected answers
- Indication of issues to which the examinee is probably confessing while still scoring the other issues
- Updated "Conclusion" and a new section, "Explanation of examinee answers"

With these advancements, it's never been easier for credibility assessment experts to validate truth and expose lies. Expect continual improvements in the future.

Click your email "forward" button to send this email to others interested in credibility assessment. And please share industry news with us! We'd love to hear from you. Email: info@converus.com.

About Converus

Converus provides scientifically validated credibility assessment technologies. EyeDetect®, which detects deception by measuring involuntary eye behavior, is a fast, accurate, affordable, noncontact, scalable, and fully automated option to polygraph. EyeDetect+ is the world's first automated polygraph, making the testing process impartial, accurate, and less intrusive (than a traditional polygraph). It assesses credibility by monitoring and recording ocular activity plus physiological activity similar to a traditional polygraph. Customers worldwide use the EyeDetect product line for screening and investigations to help protect countries, corporations and communities from corruption, crime and threats. Converus is headquartered in Lehi, Utah, USA. Visit: converus.com
